

ENGINEERING VERSATILITY FOR TOMORROW'S JOB SITES

JIG CLAMPS – ADVANCING UNIVERSAL ATTACHMENT TECHNOLOGY FOR SKID STEER LOADERS

**Mr. Jitesh Patdiya,
Director, JIG Clamps**

JIG CLAMPS is a technology-driven manufacturer specialising in engineered attachments for the agriculture, infrastructure, construction, and municipal sectors. Operating from its head office in Vadodara and a strategically located 15,000 sq. ft. manufacturing facility at GIDC–Halol, Panchmahal, the company maintains fully equipped fabrication bays, CNC machining units, and a dedicated tool-room. This integrated setup ensures a controlled production environment capable of delivering consistent dimensional accuracy, high structural endurance, and repeatable performance in field-intensive applications.

Established in 2021 with a focus on special-purpose clamping devices for automotive and engineering industries, the company has steadily evolved under the leadership of Mr. Jitesh Patadiya,

who brings over 25 years of expertise in product development, marketing, and service for global earthmoving brands such as L&T, CNH, Terex, Aquarius, and Manitou. Leveraging this industry background, JIG CLAMPS expanded into the design and manufacture of attachments for Skid Steer Loaders (SSL) a domain that demands precision engineering, hydraulic compatibility, and an understanding of diverse operating conditions across India.

Skid steer attachments fundamentally enhance the operational spectrum of an SSL by utilising the loader's hydraulic powertrain to perform material handling, grading, excavation, sweeping, demolition, and utility operations. The ability to switch between multiple attachments on a single machine significantly reduces equipment redundancy, optimises fleet utilisation, and lowers maintenance and inventory overheads. This multi-functional adaptability is the foundation of JIG CLAMPS' product philosophy.

By 2023–24, the company introduced a full suite of universal attachment models, designed for cross-compatibility with major SSL brands including Terex-Vectra, Bobcat, Manitou, JCB, CASE, and CAT. **The current product portfolio includes:**

- Backhoe Attachment
- Sweeper Collector (Two Variants)
- Standard Loader Bucket
- Pallet Fork
- 6-in-1 Bucket
- Grapple Bucket

Upcoming engineered solutions extend into high-demand categories such as Rock Bucket, Work Platform, and

Telehandler all developed with an emphasis on structural rigidity, operator safety, and hydraulic efficiency.

JIG CLAMPS' client ecosystem spans OEM manufacturers, state-level OEM dealers, dealer sales engineers, existing SSL owners, municipal corporations, Nagar Palikas, government procurement platforms (GEM), Defence units, NDRF/SDRF teams, ports, power plants, and cement plants. This diverse operational base drives the company's focus on designing robust, field-tested attachments capable of performing reliably across varied terrain and duty cycles.

Every product is engineered through a systematic design protocol involving load analysis, stress mapping, material optimisation, and performance validation. Precision welding, accurate fitment tolerances, and maintenance-friendly interfaces ensure long service life and reduced downtime in high-intensity environments.

Guided by a clear vision to lead in innovative, reliable attachment engineering, JIG CLAMPS continues to strengthen its capabilities through process improvement, technology adoption, and continuous skill development. Its mission is anchored in delivering high-performance attachments that elevate job-site productivity, meet global quality benchmarks, and support safer, more efficient machine operation.

In a sector defined by reliability and engineering discipline, JIG CLAMPS stands positioned as a trusted manufacturer shaping the future of Skid Steer Loader attachments.
